

complexity theory

clouds weather rivers organisms

stock markets networks minds societies

narrative fields

the more we learn about complex dynamic systems

quantum to galactic

the more reason we have to hope

earth:

an interdependent fractal minded garden

nested with self-similarity / mystery / wonder

fragile living poiesis

self-organizing in feedback loop relationships

from the ground up

the whole greater than the analyzable parts

each of us choosing within our horizon of possible

our thoughts / words / steps

music / dance / art / dialogue unpredictable

wanting to get closer to free

aware sustainability has conditions

look around

call it what we will

either we create a bifurcation

or face global systemic collapse

the genius of human intelligence

we can correct mistaken narrative

if we grasp the roots of the problem

and each use what power we have

a small perturbation can effect large change
